Mohamed Tawfiq Cassim
Propert-Ease

App Overview:

Propert-Ease is a construction management app for contractors, project managers, and customers to automate the construction process while eliminating manual processes. It's a centralised platform that integrates all construction operations into one central hub, Propert-Ease has both web app (C# in Visual Studio) and mobile app (Kotlin in Android Studio) and works hand in hand with each other to provide users with similar design and exact concept to reduce confusion when switching from mobile app to web app. This team project monitors progress across multiple sites in real-time, automates reports and maintenance issues, allows users to assign/monitor/evaluate tasks, and track every operation the construction company does. Users are able to login/create accounts and select their roles, create projects that meet timelines and budgets, log issues with image/documentation, automate task assignment and performance tracking, upload secure documentation for the business, real-time notifications, and visualise operations.

COMMUNICATION
System Admin (admin):
Hi everyone!
Gerry (pm):
Hi, how is everyone doing today? Hope the work is going well.
Matt (contractor):
All is going well, needed to check with Bella if she has any complaints about the pipes...
Bella (Client):
No complaints Matt, you're doing great
